Subject: Email regarding West Lake Investigation

Good afternoon Audrey and David,

I wanted you to be aware of an email that was routed to us that is being distributed by some of the Coldwater Creek attorneys and parties. As you know, contrary to the claims below, no waste has been generated or disposed of from the West Lake Isolation Barrier Pre-Design Investigation. But the e-mail below demonstrates the attempts of certain interested parties to connect West Lake related issues to the Roxana Landfill. This reinforces the concerns we highlighted in our meeting in December regarding the negative effects that would result from removing any isolation barrier waste from the West Lake site for disposal.

Please let me know if you have any questions or would like to discuss further.

Thank you,
Jessie Merrigan

Subject: Lots of News

Hello Jess, Chris, and Kate....

Lots of news to quickly share.

First of all, the "Coldwater Creek-Just the Facts Please" facebook group is releasing updated health information maps THIS Wednesday, January 15th, at the 6:30 pm meeting of the "West Lake Landfill Community Group" in Bridgeton. Maps released include all cancers, appendix cancer, and autoimmune diseases among other maps. We are hosting a press release at 1 pm in a small room, but will have an open meeting at 6:30 and hope you can attend. Last month's meeting had around 250-300 people, and I think this will be even better attended. We are trying to secure live webcasting; however, it is always a bit dicey and risky it will work!

Secondly, VERY important to us here in Edwardsville, it has been reported to me the recent last few weeks of samples that everyone is up-in-arms about from the West Lake Landfill (they contained radionuclides when the government thought they would be clean) ARE BEING SHIPPED TO ROXANA after being diluted with other garbage. I need help in researching this and getting more facts. Here are some things I was forwarded from one of our researchers, but they have not provided me the sources.

(Sneaking in a request here...could someone please forward me Tor's email address? THX.)

1. Large, Complicated, or Unusual Authorizations for use of Radioactive Materials :
Recently, a landfill in Roxana, Illinois has received a number of radioactive material contaminated waste shipments from waste transfer stations in Missouri, a non-Agreement State. The Bureau Chief asked NRC representatives if they could interact with the Missouri facilities, which are not licensees, to ensure that proper monitoring is performed prior to shipping waste to the landfill. Region III personnel contacted the waste transfer stations and received assurances that upgraded radiation monitoring systems were being installed which should help preclude shipments of contaminated waste to the landfill.

2. (West Lake/Bridgeton Landfill) north quarry contingency plan part 2 07.26.13
<http://www.dnr.mo.gov/bridgeton/docs/northquarrycontingencyplanpart2072613.pdf>
Pg 40.

During the excavation of the waste, the material will be placed directly into lined roll-off containers or in a haul truck provided by Bridgeton Landfill. Once the containers are full, they will be tarped and transported to the on-site transfer station or hauled directly to Roxanna Landfill. Bridgeton Landfill will be handling the transportation of these wastes either from the transfer station or the direct haul to Roxanna Landfill. The waste handling protocol at the Transfer Station is to place the initial lifts with the excavated spoil material in each transfer trailer or truck, and then spoil material will be approach minimizes odors from emanating to the atmosphere during waste transport to the landfill. capped with waste that has been received at the Transfer Station from other sources.
